*The Blade that changed how sports bikes were built*

Aiming to create a high-performance motorcycle that could defeat its own RVF750 in Endurance Road Races, Honda developed an R&D project that led directly to the CBR900RR, in 1992. With 128 HP, it was not the most powerful of its time. However, thanks to a dry weight of 185 kg when all rivals were well over 200 kg, the first Fireblade, soon nicknamed "Blade" by the fans, was so easy to control that it seemed to read its rider's mind. More than 25 years after, the most powerful and nimble Honda bikes keep carrying the Blade legacy.

The CBR900RR Fireblade that started all.

### What does HSTC means?

Since 1992 with the ST1100 aka "Pan European" model, Honda equips more and more its motorcycles with a system called Honda Selectable Torque Control (HSTC). This system monitors constantly the speeds of the front and rear wheels via speed sensors incorporated into the Anti-Lock Braking System (ABS). When the rear wheel begins to rotate significantly faster than the front, the systems reduces fuel delivery to the engine and limits rear-wheel slippage. In 2019 with the new CBR650R, Honda applied this technology for the first time to its mid-displacement SuperSport motorcycle. The rider can deactivate it on demand.

### *Is reliability supposed to be boring?*

*It's not rare to find some CB500 proudly boasting more than 300,000 kms (more than 186,000 miles), but the long-time favourite of the couriers and the driving school is much more than a workhorse. Beginning in France in 1996, the CB500 Cup spread across Europe quickly. Since 2014, it is on CBR500R that young talents try to make a name by themselves, on a budget. Sébastien Charpentier or James Toseland, to name a few, started there.*
